                                                                                      measuring howen gene expression in a sumple derived iron homes feetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying your expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exennected exid probe of the invention.

seguence and an objeonationtide comprising a sequence complementary to a polynuclectide which comprises a 3° and sequence, where the objeonated objectide comprises a 1° and sequence, where the combination of the 5° end sequence is selected from those defined in the specification The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods AAMIG166 to AAMIB3C2 to AAMIB3C3 to AAMIBACA

from human breast and Michaells, the method involves contacting the probes with a collection of detectably labelled nucleic acids derived from human breast, and then measuring the label bound to each probe of them increarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognessing the toxicity of chemical expression analysis is useful for deservable the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less hias than expressed sequence tag microarrays. The method is suitable for rapid production of lunctional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1360 SDSGDSJEVSRNVEETVVK11SVPVDALPHVPEHRRIPTLVQLVDTLGAEKFFIWITLLTL 1419
                                             The invention relates to a spatially-addressable set of single exonnucleic acid probes for measuring gene expression in a sample derived
                                                                                                                                                                                                                                                                                                                       Note, The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formal directly from WIPO at ftp wipo inf/pub/published_port_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0, Gapp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Humman, foetal liver, gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide #3890 encoded by human foetal liver single exon probe.
              Claim 27; SEQ ID NO 14153; 327pp / sequence listing, English.

The present invention describes primer sets for synthesistra $602 full-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the somehouse strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprising a sequence complementary to the complementary strand of a folynucleotide which comprises a 5'-end

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCA) primers, oliqumers, and for chromosome and gene mapping, and in recombinant production of (II). The

polymoreleatides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (i) is useful in gene therapy techniques to restain north arithity of (II) or no treal disease states involving (II). (II) is useful for generating antibodies against 1t, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding pattners are useful in medical imaging of sites expressing (II). (I) are useful for treating disoiders involving abenant protein expression or biological activity. The polypertide and polymorleades equences have applications in
                                                                                                                                                                                            diagnostics, forensics, gene mapping, identification of mutations and trapnostics to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Absolutio-Abs30377 represent movel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO.

for diagnosing prostato fumors, e g by hybridization or New BAP28 polynucirotides and polypeptides everexpressed in prestate polymerase chain reaction assays cancer cells

Claim 14; Page 297-304; 349pp; English.

The invention is directed to BAP2B polypeptides, JAP2B polynucleotide sequences and regulatory region located at the 3° and 5° ends of the BAP2B could recombine the BAP2B polynucleotides can be expressed by standard recombinant methodology BAP2B polynucleotides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP2B expression and/or activity may be assayed (or 3° by polymease chair reaction (PCR) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP2B polypeptides are useful as diagnostic reagents. Bialbelic markers of the BAP2B apreams are useful and analysis. The present sequence represents a protein encoded by a lirst cDNA sequence of the BAP2B gene consisting of the exons 1 to 45.

WPI; 2001-639362/73

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, lorensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

Claim 20; SEQ ID No 31927; 103pp; English.

The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, Oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal artirity of (11) or of the respectivity of (11) or o quantitating a polypopide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical imaging oil sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, foreusics, gene mapping, identification of mutations in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABGNONIN-ABGNONIN represent novel human Note: The sequence data for this patient did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fire,wipo.int/pub/published\_prt\_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the present involved describes primer sets for synthesising 5602 trul length couns detrined in the specification. Where a primer set comprises: (a) an olido-dI primer and an olidonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleatide empises at least 15 nucleotides, where the olidonucleotide empises at least 15 nucleotides; or (b) a combination of an olidonucleotide comprising a sequence complementary strand of a polynucleotide which comprises a 5'-end sequence and an olidonucleotide comprises a 3'-end sequence, where the polynucleotide comprises a 3'-end sequence, where the polynucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the 5' end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in qune therapy. The primers are useful for synthesising pelynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in gene therapy. The primers are useful for synthosising polynucleotides, particularly full length CDNAs. The primers are also useful for the detection and/or disanosis of the abnormality of the proteins encoded by the full length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAHSULE for AAHSULE AAAHSULE AAHSULE AAAHSU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucieolides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human: primer: detection; diagnosis: antisense therapy; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      prokaryotic cellular proliferation, their use in identifying the affects, their use in the discovery of nowel antibuoties, the rescential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylosocous aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruqinosa and Enferococous laccalis. The invention is also useful for the identification of potential new farqets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies repable of funding to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense rucleic acid sequence is also useful to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for homologous nucleic acies which are required for cell proliferation in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Wall D, Trawick JD, Carr GJ;

and contg. restriction enzyme sites. The gene is carried on the cloning vector pERISH7-alpha, in which the rcsB related gene is rcsB alpha which contains 7 substituted bases and the ampicillin resistance gene from pUCl8 (AATACT is substit. for tch Scal recognition site AGPACT). Using this new cloning vector the specific selection medium or chromogen for lac 2 is not required.
                                            The sequence is that of an resB related gene prod, having the same amino acid Sequence as the resB gene prod. (the cps regulatory gene)

The gene is carried on the cloning vector pERISHS-alpha, in which the rosB related gene is rosB-alpha which contains 7 substituted bases and the ampicillin resistance gene from pUGHS. Using this new cloning vector the specific selection medium or chromogen for law 2 is not required.

```
The sequence is produced by the rcsB gene region, the regulatory gene of E. coli capsular polysaccharde synthetic gene. The gene may be inserted in a wester and foreign DNA inserted at the rcsB gene locus. The ilyated vector (e.g. pERISHI) may be used to transform E. coli HBIOI cells, with only recombinant cells being cultured. The gene provides a method for selection of recombinant clones, without the need for replica or colour media.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1900 or more genes from brosphila. The invention is useful in developmental biology and in clucidating cell signalling and cell-cell interactions in higher cukaryotes for the development of insecticidas, therapeutics and pharmaceutical fungs. The invention discloses genomic DNA sequences (ABLL6176-ABL90511), expressed DNA sequences (ABL018176-ABL90511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIP9 at [tp.wipo.int/pub/publis.ed_pet_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genes from Drosophila and for elucidating \operatorname{cell} signalling and \operatorname{cell-cell} interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                          polynucleutides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or no treat disease states involving
                                                                                                (II) Is useful for generaling artibodies against it, detecting or quantitating a polypertide in tissue, as molecular weight markers and us a food supplement. (I) and its binding partners are useful in medical imaging of sites expressing (I). (I) and (II) are useful in the dispeptide and polymented profession or binding a site and polymented are useful to treating disorders involving aberrant profession expression or binding artiful dispeptide and polymented tide sequences have applications in diagnostics, forension, gene inapping identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention is concerned with the isolation of NIM1 homologues
                                                                                                                                                                                                                                                                              and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from Willow at ftp.Wipo.int/pub/published_pet_sequences.
polymerase shala reaction (PCB) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and their coding sequences from Arabidopsis thaliana, Brassica mapus, Nicotiana tabacum, Lycopersicon esculentum, Beta vulgaris, Helianthus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nachele acid detection reagent capable of delecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and
annuls and Solanum tuberosum, NIMT is one of the proteins involved in the signal transduction cascade leading to systemic acquired resistance (SAR) in plants. This gives the plants an increased resistance to disease. The protein and gene can be used to produce transgenic plants resistant to
                                                                    diseases caused by viruses, such as tobacco of cucumber accale virus, ringspot virus, pelargonium leaf curl virus, red clover mottle virus, tomato bushy stunt virus, fungi, including Phythophthora parasitica and Peromospota tabacilia, bacteria such as Pseudomontas syringae and ptabaci, insects, including aphids and lepidophera and memalodes such as Meleidogyne incognita. In particular they can be used against disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more
                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ARLIBITA-ARLIBIT), expressed DNA sequences (ARLIBITS) and the encoded proteins
